Spinning is the twisting together of drawn-out strands of fibers to form yarn, and is a major part of the process of textile production. It involves the arrangement of fibers into a continuous filament or yarn, which can then be woven or knitted into fabric. The process of spinning can be performed with a variety of techniques and equipment, depending on the type of fiber and the desired end result. Spinning is a crucial step in the production of textiles, as it sets the foundation for the final product's quality and durability.
